Continuation of 2. NOTE: The new issues being:

- a) a system comprised of a pointing object; a camera that has in its field of view at least one of the following: (i) the pointing object only, or (ii) the display and the pointing object, or (iii) the display and the reflection or effect that the pointing object can produce on the display; a method for detecting the position of the pointing object or its reflection or effect on the display in the image registered by the camera, and, a method for establishing the mapping between the position of the pointing object or its reflection or effect on the display in the image registered by the camera;
- b) a method comprising the steps of: defining at least one characteristic of the pointing object or its reflection or effect on the display that (i) is registered in the image captured by the camera and (ii) distinguishes the pointing object from other objects registered in the image from the camera; analyzing the image from the camera to locate the characteristic or characteristics of the pointing object its reflection or effect on the display pointing object; determining the most likely position of the pointing object or its reflection or effect on the display in the image from the camera based on at least one of the following: (i) the last known position of the pointing object or its reflection or effect on the display in the image, the position or positions at which the at least one distinguishing characteristic of the pointing object, or its reflection or effect on the display or the set of the picture elements in the image that comprise the rendition of the pointing object, or its reflection or effect on the display; and
- c) a method comprising the steps of: defining the boundaries of the positions that the pointing object can assume in addressing points or regions on the display and defining, within the said boundaries, a continuous pointing object surface; defining the boundaries of the display and defining within the boundaries of the display, a continuous pointing object surface; segmenting the display surface into at least two regions; segmenting the pointing object surface into at least two regions; warping the geometry of the surface for the pointing object so that at least one region of the pointing object surface overlaps with at least one region of the display surface; and establishing a one-to-one or many to one correspondence between overlapping the regions of the pointing object surface and the display surface, respectively.
